

# Water Filter

Water Filter

## **!!! WARNING !!!**

Never install a water filter upstream from the pressure switch. If it clogs, stopping water flow, the switch, unable to read the pressure, will keep the pump running until damage occurs. The flow of water should reach the pressure switch and pressure tank before it reaches a water filter or a shutoff valve.

Quite often with well water it is a good idea to have a water filter. Many wells make some measure of sediment. Trapping those sediments in a changeable water filter will keep those sediments from plugging up your fixtures farther downstream.
